Juan Jonck

Developer

👤 Profile

Fullstack Developer with core strength in PHP development, including both pure PHP programming and practical experience with Laravel and CodeIgniter frameworks. Proficient in building robust web applications using MySQL, Git, HTML, CSS3, Bootstrap, and JavaScript/jQuery. Expanding technical horizons through hands-on experience with Angular, AWS, and Flutter. Strong foundation in database design and implementation, consistently delivering quality web solutions. Known for rapid adaptation to new technologies and a determined problem-solving approach - if it exists, I'll learn it and master it.

💼 Employment History

Developer at Elemental Web Solutions, Cape Town

October 2023 — Present

Developing robust web and software applications using PHP (both pure PHP and frameworks like CodeIgniter and Laravel), with a focus on scalable back-end solutions and database architecture.

Responsible for implementing front-end solutions and ensuring seamless integration between front-end and back-end systems.

Takes ownership of complete feature development cycles, from database design to user interface implementation using HTML, CSS3, Bootstrap, and JavaScript/jQuery. Consistently demonstrates ability to quickly adapt to new technical requirements and solve complex problems - approaching each challenge with determination and a growth mindset.

Lead Developer at CRT Group, George

January 2018 — Present

I led the development of web applications and software, customizing solutions to meet client requirements. In this role, I not only took charge of hands-on development but also played a pivotal role in mentoring and guiding other developers and interns.

Additionally, I actively participated in bug support, addressing issues promptly to ensure seamless functionality. Beyond coding responsibilities, I managed email setup and support, contributing to the overall efficiency and reliability of the systems.
